**“To Whom It May Concern”**

25 June 2013 in Prague

Dear Sir/Madam,

Aerospace Research and Test Establishment (VZLU) is participating in the LM2011016 - Wind tunnels project, which is part of the Large Infrastructures programme supported by the Ministry of Education, Youth and Sports. Within this project, we provide external users from educational institutions and research organizations with free open access to this research infrastructure.

In this context, we would like to offer you our 3mLSWT low-speed wind tunnel located in Prague Letňany. Our facility offers open access to use this large infrastructure, both for the possibility of elaboration of theses and dissertations, and for the opportunity to carry out experiments, measurements and consultations in the field of experimental aerodynamics.

Research projects and experiments carried out in the large infrastructure under open access are deprived of fees for the use of the infrastructure. This applies to operating costs and operating personnel services related specifically to activity performed there. Service staff (mechanic and measurement engineer) will be provided free of charge for the entire period of the project in order to ensure safe operation of the large infrastructure.

Services that are not covered under the open access include production of prototypes and products, customization of models, tools beyond the basic infrastructure equipment, advanced measurement techniques (PIV, etc.) and data processing.

Individual applications will be considered in the order in which they are delivered to VZLU, up to full capacity, which is allocated for open access. The open access regime is linked with actual research and project activity of the wind tunnel, so the actual date of open access is always subject to an agreement between VZLU and the applicant.

The applicant for an open access to research infrastructure must ensure that the nature of the required activity is an independent research and implementation of this activity will not provide any entity in the market with any form of direct or indirect support.

F-006z1

VZLU reserves the right to refuse an application for both technical and safety risks arising from the considered experiment, and also in case of inappropriate technical content of the experiment. A cooperation agreement will be concluded with successful applicants. The agreement will define further conditions for the utilization of the infrastructure.

If you are interested in using our infrastructure, please contact the Head of Aerodynamics directly: Ing. Jiří Fiala, tel: +420 225 115 260, e-mail: [fiala@vzlu.cz](mailto:fiala@vzlu.cz).

For more information about the use of our research infrastructure please see our website [www.vzlu.cz](http://www.vzlu.cz), section News, where you can also download the appropriate application form.
